Tenova Core Installs Plate Heat Treating Furnace for Outokumpu

Pittsburgh, PA, September 7, 2010—Tenova Core has recently completed the successful start-up of a walking hearth plate heat treating furnace at Outokumpu's stainless plant located in New Castle, Indiana. The furnace was installed as part of a plant upgrade project.

The walking hearth furnace features state-of-the-art low NOx burners as well as a complete control and automation system that includes an advanced Level 1 tracking system. Tenova Core also designed and supplied a custom jet air and water mist cooling system to reduce the temperature of the stainless plate product after it exits the furnace.

About Tenova Core

Tenova Core is a leader for the design and supply of reheating, heat treating, specialty and carbon processing furnaces as well as melt shop equipment, technical services and automation systems. For more information visit www.tenovacore.com
