## **Tenova Pyromet exporting Electrode Equipment to Brazil**

**Johannesburg, September 30, 2008.** Tenova Pyromet's footprint is making an impact in Brazil. A contract has been finalized with a major global player on the mining market based in Brazil for the supply of complete Electrode Columns for 2 furnaces of a plant located in northern Brazil.

In order to accelerate the project, engineering work has already begun. After the Brazilian Company selected Tenova Pyromet as their preferred technology partner for the rebuild, Tenova Pyromet immediately started working together to reduce the delivery times of the key equipment, as this is the critical part of the project. Engineering work is already well underway, and Tenova are aiming to deliver the main equipment for the first set of electrodes before the end of the year.

The new project will serve as the first step in introducing the innovative technologies of Tenova Pyromet for the South American as well as North American ferroalloy producers. Tenova Group has been working with this world wide Customer on several other projects in the recent past, but this project will be the first application of Tenova Pyromet technology with them. The project is also aiming to be a key reference due to this Customer's leadership in the iron and ferroalloy production markets.

Brazilian ferroalloys producers have already indicated the need to discuss future projects with Tenova Pyromet, which will further enlarge Tenova presence in the American continent.

Tenova designs and supplies advanced technologies, products and services for the metals and mining industries. Tenova operates close to its customers through a network of 30 companies based on the 5 continents.
