## Core Furnace Systems Installs Heat Treating Line for The Timken Company

**Pittsburgh, PA (USA) February 2009** - Core Furnace Systems, a Tenova Group Company, has recently completed the successful start-up of a complete harden, quench and temper heat treating line in The Timken Company's new thermal treating facility located at its steel plant in Canton, Ohio.

The "roller-barrel" type heat treating furnaces will provide hardening and tempering applications for the heat treatment steel bars and tube. The CORE furnaces feature energy efficient combustion systems as well as advanced process control.

CORE's project scope also included induction preheating, ring quench as well as a custom designed material handling system to seamlessly move the product through the heat treating process.

The installation of these furnaces will provide Timken with additional heat treating capacity.

Tenova designs and supplies advanced technologies, products and services for the metals and mining industries. Tenova operates close to its customers through a network of 31 companies based on the 5 continents.
