## **Australian order for the Material Handling unit of Techint Technologies.**

Techint Technologies, through its Australian Company Techint-SEMF Pty Ltd, obtained a positive achievement with SEDGMAN Limited, a leading provider of engineering services to the Australian coal industry.

Techint-SEMF was awarded an important contract for the turn-key supply for a radial stacker for coal to be installed at the SONOMA Coal Preparation Plant located in Collinsville (North of Queensland) owned by QCOAL Pty Ltd.

Techint-SEMF has just successfully delivered a similar radial stacker to Thiess-SEDGMAN JV for the mine of Wilpinjong in the Hunter Valley (NSW).

The new order with SEDGMAN represents a confirmation of continuity and trust in Techint-SEMF's technology and capability.

The radial stacker has a capacity of 800 tph and a conveyor length of 90 m. The expected delivery date is June 2007 and the whole preparation plant will be commissioned in September 2007.

This is a further key realization of Techint-SEMF in the bulk material handling market and is particularly significant due to the strategic coal value in this part of Australia.

With over 30 billion tonnes of identified resources of black coal in Queensland, the coal industry in Australia is a major contributor to the state's economy and the largest exporter of seaborne coal in the world.

*Techint Technologies design and supply a wide range of equipment and services for the metals and raw materials industries. For more information visit our website at [www.techint-technologies.com](http://www.techint-technologies.com).*
