## **Tenova is the new name of Techint Technologies**

Techint Technologies is a worldwide supplier of advanced technologies, products and services for the metal and mining industries. Following a period of fast growth pulled by the excellent market momentum and the successful completion of several M&A activities, Techint Technologies has taken the strategic decision to change name into Tenova to have an independent strong identity on the market.

The new name Tenova wants to keep, through the prefix “Te”, a strong link with the Techint Group and with Technology, both at the root of its existence, and, through the word “nova”, a clear commitment to innovation essential for a company supplying advanced technologies.

Tenova is a network of synergic companies providing innovative integrated solutions for complete process areas:

- fully integrated EAF steel making from iron and ferroalloy ores and scrap up to liquid steel;
- thermal processing from reheating to heat treatment of high quality flat and long products;
- processing of metal strips from hot strip mill down to all final products;
- fully automated roll shops for hot strip and cold mills;
- handling, storage, loading and unloading of bulk materials from mines to the end users of iron ore, coal, bauxite, and others

Order intake has overcome \$1bn and is foreseen to increase further in the next years. Tenova employs 1600 people in 20 operating companies in 14 countries on the five continents. A network of companies and of people fully committed to technology and innovation for the metal and mining industries, targeting the needs of quality, energy saving and pollution control.

*Tenova, former Techint Technologies, designs and supplies advanced technologies, products and services for the metal and mining industries. For more information visit our website at [www.tenovagroup.com](http://www.tenovagroup.com).*
