Techint Technologies Furnaces in South America

In the Latin America Techint Technologies obtained several successes in the Furnaces' Sector:

- the walking beam furnace rated 300 tph located at the Plant General Savio at Siderar, San Nicolas (Argentina) is under erection and its start up is scheduled for November 2006;
- at the end of last year Techint got the order for the 330 tph walking beam furnace to be installed at the Hylsa Plant in Monterrey, Mexico expected to be commissioned for August 2007.

Both the above furnaces are equipped with Techint FlexyTech® Innovative Combustion System and Low-NOx burners designed to run flameless.

At the Tamsa Plant in Veracruz, Mexico, Techint will realize two furnaces one for hardening and the other for tempering tubes both rated 70 tph. In the same plant Techint revamped in 2000 two other similar furnaces increasing their production of 70%.

The new furnaces will start their activity in April 2007.

Finally, the Siderca Plant, Campana (Argentina) awarded Techint the order for two furnaces 50 tph one for hardening and the other for tempering designed for a new heating treatment for tubes.

All these achievements reconfirm the valued reliability of Techint technology gained in the Furnaces' production.

Techint Technologies design and supply a wide range of equipment and services for the metals, glass and raw materials industries. For more information visit our website at www.techint-technologies.com.
