## **EAF Technologies in Korea with the “Techint Day”**

Aimed by the strong interest for the strategic Korean market and by the acquisition of recent orders, the Melt Shops Business Unit of Techint Technologies, (Techint Group, Italy) has celebrated this year its “Techint Day” in Seoul, Korea, on May 17<sup>th</sup> last.

The Event, dedicated to EAF Melting Technologies, has been organized in cooperation with Kenstone, the Korean Partner of the Techint Melt Shops BU.

During this Day, Techint Executives met more than 40 decision-makers of the Korean steel industry and highlighted the ultimate technologies and processes in the EAF melting applications with particular reference to the environmental-friendly and cost-reducing technologies Consteel®, KT (Koester Technologies) injector lances, and Goodfellow EFSOP®, the world’s leading off-gas-based process control system for EAF’s, recently installed in Korea at Posco and Dongkuk steel plants.

A very positive result for Techint still more oriented now to improve its presence in such a dynamic Country.
